## Week 1 Quiz

20 questions

| 1.<br>R was   | developed by statisticians working at   |
|---------------|---|
| 0             | The University of New South Wales   |
| 0             | Harvard University  |
| 0             | Bell Labs   |
|               | The University of Auckland  |
|               | The offiversity of Adeliana   |
| 2.            |   |
| The de        | efinition of free software consists of four freedoms (freedoms 0 through 3). Which of the following is ne of the freedoms that are part of the definition? Select all that apply. |
|               | The freedom to study how the program works, and adapt it to your needs.   |
|               | The freedom to prevent users from using the software for undesirable purposes.  |
|               | The freedom to sell the software for any price.   |
|               | The freedom to redistribute copies so you can help your neighbor.   |
|               | The freedom to improve the program, and release your improvements to the public, so that the whole community benefits.  |
|               | The freedom to restrict access to the source code for the software.   |
|               | The freedom to run the program, for any purpose.  |
|               |   |
| 3.<br>In R th | e following are all atomic data types EXCEPT: (Select all that apply)   |
|               | character   |
|               | matrix  |
|               | array   |
|               | list  |
|               | logical   |
|               | numeric   |
|               | integer   |
|               | complex   |
|               | data frame  |
|               | table   |

16/2/2016 Week 1 Quiz | Coursera

| 4. If I execution                     | cute the expression $x < -4$ in R, what is the class of the object `x' as determined by the `class()' n?  |
|---------------------------------------|---|
| 0                                     | complex   |
| 0                                     | integer   |
| 0                                     | numeric   |
| 0                                     | matrix  |
| 0                                     | real  |
| 0                                     | list  |
| 0                                     | vector  |
| 5.<br>What is                         | the class of the object defined by x <- c(4, TRUE)?   |
| 0                                     | logical   |
| 0                                     | character   |
| 0                                     | list  |
| 0                                     | matrix  |
| 0                                     | numeric   |
|                                       |   |
| 0                                     | integer   |
| 6.<br>If I have                       | integer e two vectors $x <- c(1,3,5)$ and $y <- c(3,2,10)$ , what is produced by the expression cbind( $x$ , $y$ )?   |
|                                       |   |
|                                       | e two vectors $x <- c(1,3,5)$ and $y <- c(3,2,10)$ , what is produced by the expression cbind( $x$ , $y$ )?   |
|                                       | e two vectors x <- c(1,3, 5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)? a 3 by 3 matrix  |
|                                       | e two vectors x <- c(1,3, 5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)?  a 3 by 3 matrix  a 2 by 3 matrix  |
|                                       | e two vectors x <- c(1,3, 5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)?  a 3 by 3 matrix  a 2 by 3 matrix  a 2 by 2 matrix   |
|                                       | e two vectors x <- c(1,3, 5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)?  a 3 by 3 matrix  a 2 by 3 matrix  a 2 by 2 matrix  a matrix with 2 columns and 3 rows   |
| O O O O O O O O O O O O O O O O O O O | e two vectors x <- c(1,3, 5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)?  a 3 by 3 matrix  a 2 by 3 matrix  a 2 by 2 matrix  a matrix with 2 columns and 3 rows  a vector of length 2   |
| O O O O O O O O O O O O O O O O O O O | e two vectors x <- c(1,3,5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)?  a 3 by 3 matrix  a 2 by 3 matrix  a 2 by 2 matrix  a matrix with 2 columns and 3 rows  a vector of length 2  a vector of length 3  |
| O O O O O O O O O O O O O O O O O O O | e two vectors x <- c(1,3, 5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)?  a 3 by 3 matrix  a 2 by 3 matrix  a 2 by 2 matrix  a matrix with 2 columns and 3 rows  a vector of length 2  a vector of length 3   |
| O O O O O O O O O O O O O O O O O O O | e two vectors x <- c(1,3,5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)?  a 3 by 3 matrix  a 2 by 3 matrix  a 2 by 2 matrix  a matrix with 2 columns and 3 rows  a vector of length 2  a vector of length 3  |
| O O O O O O O O O O O O O O O O O O O | e two vectors x <- c(1,3,5) and y <- c(3, 2, 10), what is produced by the expression cbind(x, y)?  a 3 by 3 matrix  a 2 by 3 matrix  a matrix with 2 columns and 3 rows  a vector of length 2  a vector of length 3  roperty of vectors in R is that  the length of a vector must be less than 32,768  elements of a vector can be of different classes |

8.

| Sunnose I have a | a list defined as y | v <- list(2 "a" "h | " TRUE) Wha | at does v[[2]] give | e me? Select all that apply. |
|------------------|---------------------|--------------------|-------------|---------------------|------------------------------|

9.

Suppose I have a vector x <- 1:4 and a vector y <- 2. What is produced by the expression x + y?

- O an integer vector with elements 3, 2, 3, 6.
- an integer vector with elements 3, 2, 3, 4.
- a numeric vector with elements 3, 2, 3, 6.
- a numeric vector with elements 3, 2, 3, 4.
- a numeric vector with elements 1, 2, 3, 6.
- a numeric vector with elements 3, 4, 5, 6.

10.

Suppose I have a vector x <- c(17, 14, 4, 5, 13, 12, 10) and I want to set all elements of this vector that are greater than 10 to be equal to 4. What R code achieves this? Select all that apply.

$$x[x > 10] < -4$$

$$x[x == 10] <- 4$$

$$x[x > 10] == 4$$

$$x[x >= 11] <- 4$$

$$x[x == 4] > 10$$

11.

Use the Week 1 Quiz Data Set (https://d396qusza40orc.cloudfront.net/rprog/data/quiz1\_data.zip) to answer questions 11-20.

In the dataset provided for this Quiz, what are the column names of the dataset?

1, 2, 3, 4, 5, 6

Ozone, Solar.R, Wind

Month, Day, Temp, Wind

Ozone, Solar.R, Wind, Temp, Month, Day

12.

Extract the first 2 rows of the data frame and print them to the console. What does the output look like?

Ozone Solar.R Wind Temp Month Day
1 18 224 13.8 67 9 17
2 NA 258 9.7 81 7 22

Ozone Solar.R Wind Temp Month Day
1 9 24 10.9 71 9 14
2 18 131 8.0 76 9 29

Ozone Solar.R Wind Temp Month Day
1 7 NA 6.9 74 5 11
2 35 274 10.3 82 7 17

Ozone Solar.R Wind Temp Month Day

1 41 190 7.4 67 5 1

2 36 118 8.0 72 5 2

13.

How many observations (i.e. rows) are in this data frame?

- **O** 45
- **O** 160
- 153
- **O** 129

14.

Extract the *last* 2 rows of the data frame and print them to the console. What does the output look like?

Ozone Solar.R Wind Temp Month Day
152 34 307 12.0 66 5 17
153 13 27 10.3 76 9 18

Ozone Solar.R Wind Temp Month Day
152 18 131 8.0 76 9 29
153 20 223 11.5 68 9 30

Ozone Solar.R Wind Temp Month Day
152 31 244 10.9 78 8 19
153 29 127 9.7 82 6 7

Ozone Solar.R Wind Temp Month Day
152 11 44 9.7 62 5 20
153 108 223 8.0 85 7 25

15.

What is the value of Ozone in the 47th row?

- **O** 18
- **O** 21
- •
- **O** 6:
- **O** 34

| 16.<br>How n             | nany missing values are in the Ozone column of this data frame?   |
|--------------------------|---|
| 0                        | 43  |
| 0                        | 78  |
| 0                        | 37  |
| 0                        | 9   |
| 17.<br>What i<br>calcula | s the mean of the Ozone column in this dataset? Exclude missing values (coded as NA) from this ation.   |
| 0                        | 53.2  |
| 0                        | 31.5  |
| 0                        | 18.0  |
| 0                        | 42.1  |
|                          | t the subset of rows of the data frame where Ozone values are above 31 and Temp values are above nat is the mean of Solar.R in this subset?  212.8  205.0  334.0  185.9 |
| 19.                      |   |
| What i                   | s the mean of "Temp" when "Month" is equal to 6?  |
| 0                        | 75.3  |
| 0                        | 79.1  |
| 0                        | 90.2  |
| _                        |   |
| 20.<br>What v            | was the maximum ozone value in the month of May (i.e. Month is equal to 5)?   |
| 0                        | 18  |
| 0                        | 100   |
| 0                        | 97  |
